**Proficient:** Git, GitHub, Vite, React, Bootstrap, React-Bootstrap, TailwindCSS, Material UI  
JWT, Netlify, MongoDB, Express.js

**Familiar:** Angular, Docker, Mocha, Chai, Postman, FireBase Hosting, FireBase Auth

### PROJECTS

ReactifyMe DECEMBER 2024- PRESENT

- ReactifyMe** is a website built with **React and TailwindCSS** that provides a user-friendly interface to **showcase my skills**, projects, and professional experience. It includes dynamic loading of projects directly from GitHub, ensuring an always-up-to-date list of developments. It also features a contact form connected to a database via the backend, allowing for storage and management of user messages.
- Stripe is integrated in the plans and pricing section**, providing a secure way to make payments. One of the most unique features is the Notification Box, which pops up on the screen and displays the latest news about a specific skill or project, offering an interactive experience for users.

DeliDish NOVEMBER 2024- PRESENT

- DeliDish** Is a restaurant web application built with **React.js and Bootstrap, providing a modern and responsive look**. It includes a **dynamic** menu that displays delicious food and uses React Router for efficient navigation. **Authentication** is implemented with Login and Register functionality, **and after a successful login, the user remains logged in even with a strict refresh**. Navigation changes dynamically depending on the user's status.
